Summary

Computer Information Systems graduate and full-stack product builder experienced in Python, Java, TypeScript, React, SQL, analytics, payments, and cloud-backed applications. Builds polished customer workflows from concept through deployment, combining practical engineering, data validation, and AI-assisted development to solve real business problems.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks & Platforms: React, Next.js, REST APIs, Cloudflare Workers/D1, SQLite, Stripe

Tools & Analytics: Git, Excel, Tableau, Pandas, NumPy, responsive design, database design

Projects

Catbreed Compatibility Quiz & Paid Match Report | Full-stack product, private production build

- Designed and deployed a responsive 22-question matching experience that scores lifestyle, personality, allergy, care, and household compatibility across 16 cat breeds.
- Built an 11-chapter personalized report with breed history, trait comparisons, care routines, first-month guidance, animated breed-aware artwork, and print-ready PDF output.
- Integrated Stripe Checkout, verified payment fulfillment, Cloudflare D1 result and purchase analytics, anonymous result aggregation, and Amazon Associates product recommendations.

Uplift Beauty Studios Management Platform | AI-assisted full-stack business application

- Built responsive consultation booking, service selection, availability controls, appointment storage, and a protected admin portal for scheduling, clients, requests, leads, and analytics.
- Implemented Python and SQLite APIs for appointments, availability, authentication, client profiles, workflow requests, and data merging; used AI-assisted iteration for design, debugging, and testing.

Additional Projects: Discord bot using the ChatGPT API, video game private server, analytics dashboard, and academic course-registration system.

Experience

BNY Mellon - Future Talent Intern

New York, NY | Jan 2022 - Jul 2022

- Validated and analyzed data sent to risk-management products, helping maintain accuracy, completeness, and integrity across large data sets.
- Created and tested SQL queries for data integrity and response time; developed Java programs that automated recurring validation work.
- Partnered with cross-functional teams to investigate inconsistencies, troubleshoot technical issues, and streamline reporting workflows.

Education

Baruch College

New York, NY | Graduated May 2026

Bachelor of Business Administration, Computer Information Systems

Coursework: System Design, Object-Oriented Programming, Programming for Analytics, Database Management

Borough of Manhattan Community College (GPA 3.2)

New York, NY | Graduated Dec 2022

Associate in Applied Science, Computer Information Systems

Coursework: Object-Oriented Programming, Programming for Analytics, Database Management
